

A PLAN FOR WEED-FREE NATURAL AREAS IN GOLF COURSE SETTINGS

WEED CONTROL PROGRAM FOR NATURAL AREAS

Properly maintained natural areas in golf course settings can be both beautiful as well as beneficial to your bottom line. However, just because it is a natural area does not mean there is no required maintenance. Although these areas are less labor intensive than playable surfaces, natural areas do need attention to keep unwanted and unsightly invasive weeds at bay. Keeping natural areas tall, yet clean enough to still be golfer-friendly can be a challenge. To achieve this optimum balance, Nufarm suggests spraying in the spring and fall as well as adding a mid-summer treatment based on your exact weed control needs. Use the program below as a guide for your natural area maintenance schedule.
